

Ideation Phase

Define the Problem Statements

Date	31 January 2025
Team ID	SWTID-2026-1268
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated problem statement allows the team to find the ideal solution for the challenges customers face and to empathize with how they perceive the product or service.

PS-1 – Customer Problem Statement

I am	A ServiceNow platform administrator at an organization (manages security and data access for many teams and departments)
I'm trying to	Make sure each user can open only those records whose field values (such as department, assignment group or confidentiality level) they are entitled to see
but	Standard role-based ACLs are too coarse and cannot decide access using the value of a specific field on a record
because	Access rules are tied to roles and tables, not to record-level field conditions, and custom conditions need scripting that is hard to write and maintain
which makes me feel	Worried and anxious about accidental data exposure and compliance violations

PS-2 – Customer Problem Statement

I am	An employee or team member (for example an HR, finance or support agent) who works with records every day
I'm trying to	View and update only the records that are relevant to me without seeing other teams' sensitive information
but	I either get blocked from records I need, or I can see records that should be hidden from me
because	Access control is not enforced dynamically on field values such as state, owner or sensitivity, so permissions are inconsistent across records
which makes me feel	Frustrated and uncertain about whether I am allowed to access the data, and concerned about security

Problem Statement Summary:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	ServiceNow platform administrator	Restrict record access based on field values	Role-based ACLs are too coarse for field-level decisions	ACLs are tied to roles/tables; scripted conditions are hard to maintain	Worried and anxious
PS-2	Employee working with records daily	Access only the records relevant to me	I'm blocked from needed records or see hidden ones	Access is not enforced dynamically on field values	Frustrated and uncertain
