

Project Planning Phase

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	15 February 2025
Team ID	
Project Name	Script-controlled ACL - Restrict record access based on field value
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Requirement Analysis & Setup	USN-1	As an admin, I can define the access rule matrix (which field values are restricted to which roles/groups) so the ACL scope is clear.	5	High	
Sprint-1		USN-2	As an admin, I can create a custom field (e.g., Classification / Department) on the target table to drive record access.	3	High	
Sprint-1		USN-3	As an admin, I can create the roles and groups required to access restricted records.	3	High	
Sprint-1		USN-4	As a tester, I can create test users and assign roles/groups to validate access scenarios.	2	High	
Sprint-1		USN-5	As a tester, I can create sample records with different field values for testing.	2	Medium	
Sprint-1	ACL Creation	USN-6	As an admin, I can create a basic read ACL on the table so that record access is controlled by ACL rules.	5	High	
Sprint-2	Script-controlled ACL	USN-7	As a user, I can read a record only if my role/group matches the record's field value (script-based read ACL).	5	High	
Sprint-2		USN-8	As a user, I can create/write a record only if the script condition on the field value is satisfied (write ACL).	3	High	
Sprint-2		USN-9	As an admin, I can restrict individual field-level access using a script-controlled field ACL.	3	Medium	
Sprint-2		USN-10	As an admin, I can ensure admin / security_admin users retain override access to restricted records.	2	Medium	
Sprint-2		USN-11	As a developer, I can handle empty/null field values in the ACL script so there are no unintended access leaks.	2	Medium	

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2		USN-12	As a developer, I can use gs.hasRole() / group-membership checks inside the ACL script (answer = true/false).	5	High	
Sprint-3	Testing & Validation	USN-13	As a tester, I can impersonate each test user and verify allowed/denied record access.	5	High	
Sprint-3		USN-14	As a tester, I can use Debug Security Rules to confirm the correct ACL is evaluated.	3	High	
Sprint-3		USN-15	As a tester, I can verify lists, related lists, forms and reports show only permitted records.	3	Medium	
Sprint-3		USN-16	As a tester, I can verify access via REST API / GlideRecord is also restricted.	3	Medium	
Sprint-3		USN-17	As a developer, I can optimize the ACL script to avoid performance impact on large lists.	3	Low	
Sprint-3		USN-18	As a developer, I can fix defects found during testing.	3	High	
Sprint-4	Deployment & Handover	USN-19	As a developer, I can capture all ACLs, fields and roles in an Update Set.	3	High	
Sprint-4		USN-20	As an admin, I can deploy the Update Set to the test/production instance.	5	High	
Sprint-4		USN-21	As a stakeholder, I can perform UAT and sign off that record access works as expected.	5	High	
Sprint-4		USN-22	As a team member, I can prepare technical documentation for the ACL scripts and rules.	4	Medium	
Sprint-4		USN-23	As an end user, I can receive a short guide/training on the new access restrictions.	3	Low	

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

Velocity:

Each sprint is 6 days long and the team's velocity is 20 story points per sprint. Average velocity (AV) per iteration unit (story points per day) = velocity / sprint duration = $20 / 6 \approx 3.33$ **story points per day**. Total project size: 4 sprints x 20 = 80 story points.

Burndown Chart:

A burndown chart shows work left to do versus time. The dashed line is the ideal burn rate (80 points over 24 working days); the solid line shows actual progress, updated as each sprint completes (Sprint-1: 20 points completed).
