

Functional & Performance Testing

Model Performance Test

Date	04 October 2026
Team ID	SWTID-2026-1268
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text input validation (ACL name, field name, condition value)	Enter valid and invalid text in the ACL form fields (e.g. blank name, special characters)	Valid inputs accepted; errors shown for invalid inputs	Valid inputs saved; invalid inputs rejected with an error message	Pass
FT-02	Field-value condition validation (e.g. Department = HR)	Enter values that exist, do not exist, or are empty in the controlling field	Matching value grants access; non-matching or empty value denies access	Access granted only for the matching value	Pass
FT-03	ACL enforcement and content shown (list view, record form, masked fields)	Log in as permitted and non-permitted users and open lists and records	Permitted users see the record; others see an access denied message	Permitted users saw the record; others were denied	Pass
FT-04	API / script connection check (REST Table API and ACL script)	Call the REST Table API with valid and invalid user credentials	API responds successfully for permitted users and rejects others	Responses matched user permissions	Pass
PT-01	Response time test	Use a timer to measure list and record load time with the ACL script active	Should be under 3 seconds	Loaded within 3 seconds	Pass
PT-02	API speed test	Send multiple API calls at the same time as different users	API should not slow down	No noticeable slowdown	Pass
PT-03	Large record load test (many records in the list)	Open a list view with a large number of records while the ACL script runs	Should work smoothly without crashing	List loaded without errors or timeouts	Pass
