

Project Development Phase

Model Performance Test

Date	04 October 2026
Team ID	SWTID-2026-1268
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Access-control setup for data management using a Table, Fields and an ACL script. The ACL script reads the record's controlling field value (e.g. Department) and compares it with the user's roles to allow or deny access. Note: If the field value matches the ACL rule, the record is shown; otherwise access is denied and an error message is displayed.	<i>[Insert screenshot of the table, fields and ACL]</i>
2.	Accuracy	Training Accuracy - Not applicable (no trained model) Validation Accuracy - Not applicable Access-decision accuracy in testing - 100% (13 of 13 UAT test cases gave the expected allow / deny result)	<i>[Insert screenshot of test results]</i>
3.	Confidence Score (Only Yolo Projects)	Not applicable. This is not a YOLO / object-detection project, so class detection and confidence scores are not used. The ACL script returns a definite true (allow) or false (deny).	<i>Not applicable</i>

Note:

This project is a rule-based ServiceNow access-control solution, so the template's training, validation and confidence-score values do not apply. The 100% decision-accuracy figure is a sample value taken from the UAT test cases; replace it with your actual results and add screenshots.
