

Project Development Phase Performance Test

Date	04 October 2026
Team ID	SWTID-2026-1268
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Audit / access-log data from ServiceNow: user, record, time and result (allowed or denied), shown as a report. <i>[Insert screenshot of the access log report]</i>
2.	Data Preprocessing	No external preprocessing is needed. Log entries are generated by the ACL script in a fixed format, with empty field values recorded as blank. <i>[Insert screenshot]</i>
3.	Utilization of Filters	Access log can be filtered by user, role, table, date and result (allowed / denied). <i>[Insert screenshot of the filters]</i>
4.	Calculation fields Used	Not applicable. Tableau is not used in this project; counts of allowed and denied attempts come from ServiceNow report grouping.
5.	Dashboard design	No of Visualizations / Graphs - Not applicable (no dashboard is part of this project)
6.	Story Design	No of Visualizations / Graphs - Not applicable (no Tableau story is part of this project). The access log is a single list report with an export option.

Note:

Tableau is not part of this project. The data, filter and report details above describe the access-log report in ServiceNow (user stories USN-14 and USN-15) as the closest equivalent. Update the values and add screenshots to match what you actually built.
