Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Project Overview:

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Project Description: A ServiceNow solution in which an Access Control List (ACL) script reads the field value of a record (for example, Department) and compares it with the logged-in user's roles to allow or deny access to that record.

Project Version: 1.0

Testing Period: 01 October 2026 to 04 October 2026

Testing Scope:

- Features: login and roles, ACL creation on a table and field, field-value conditions, ACL scripts (allow/deny), filtered list views, direct-URL and API protection, field masking, audit log and report export.
- User stories / requirements: USN-1 to USN-15 and FR-1 to FR-5 (see the Data Flow Diagram & User Stories and Solution Requirements documents).

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (<https://<instance-name>.service-now.com>)

Credentials (if required): Role-based test accounts (administrator, script developer, HR user, Finance user, auditor) created in the instance; passwords are shared with testers separately.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Administrator login (USN-1)	1. Open the instance login page 2. Enter administrator credentials 3. Open the ACL configuration module	Administrator signs in and can open the ACL console	Administrator signed in and opened the ACL console	Pass
TC-002	Create role and assign to user (USN-2)	1. Create a new role 2. Assign it to a test user 3. Open the user profile	Role is shown on the user's profile	Role displayed on the profile	Pass
TC-003	Create ACL on table and controlling field (USN-3, USN-4)	1. Create an ACL on the table 2. Select the Department field 3. Add the condition Department = HR and save	ACL is saved and listed against the table	ACL saved and listed	Pass
TC-004	Matching user can open record (positive)	1. Log in as an HR user 2. Open a record whose Department is HR	Record opens normally	Record opened	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-005	Non-matching user is denied (negative)	1. Log in as a Finance user 2. Open the same HR record	Access denied; no record data shown	Access denied message displayed	Pass
TC-006	ACL script returns true / false (USN-6)	1. Add an ACL script using the record field value and current user 2. Save and activate 3. Open records as different users	Script allows matching users and denies others	Results matched for all test users	Pass
TC-007	Script error fails safe	1. Open a record whose controlling field is empty 2. Check access as a standard user	Access is denied and no error is exposed to the user	Access denied; no error shown	Pass
TC-008	List shows only permitted records (USN-10)	1. Log in as an HR user 2. Open the table list view	Only records the user is permitted to see are listed	Only permitted records listed	Pass
TC-009	Direct URL to restricted record (USN-11)	1. Log in as a Finance user 2. Paste the URL of an HR record	Access denied message; no data leaked	Access denied message displayed	Pass
TC-010	Restricted field masked (USN-12)	1. Open a record as a user without the required role 2. Check the sensitive field	Field is hidden or masked	Field hidden	Pass
TC-011	Disable an ACL (USN-5)	1. Disable the ACL 2. Open a record as a non-matching user	ACL is no longer enforced	Rule not applied while disabled	Pass
TC-012	API access respects ACL	1. Call the REST Table API as a non-matching user for an HR record	Request is rejected; no record data returned	Request rejected	Pass
TC-013	Audit log and export (USN-14, USN-15)	1. Perform allowed and denied accesses 2. Open the access log 3. Export the report	Log shows user, record, time and result; report downloads	Log entries correct; report downloaded	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Restricted record opened for a non-matching user when its URL was pasted directly	1. Log in as a Finance user 2. Paste the URL of an HR record	High	Closed	ACL applied to the read operation on the form; retest passed
BG-002	ACL script failed for every user when the controlling field was empty	1. Create a record with an empty Department 2. Open it as any user	Medium	Closed	Added an empty-value check in the script
BG-003	Access denied message wording was unclear	1. Open a restricted record as a non-matching user	Low	Closed	Message text updated
BG-004	Audit log did not show the time of each attempt	1. Open the access log after a denied attempt	Medium	Closed	Timestamp column added

Notes:

- All test cases cover both positive (permitted) and negative (denied) scenarios.
- Testers are encouraged to give detailed feedback, including suggestions for improvement.
- Bug tracking includes severity, status and steps to reproduce.
- Sign-off from both the project manager and product owner is required before deployment.
